

Asking Seedance 2.5 for music destroys your render — after you've paid for it

RUN	MUSIC	DIALOGUE	RESULT
01	in ()	yes	BLOCKED
02	in ()	yes	BLOCKED
03	in ()	no	BLOCKED
04	plain prose	yes	BLOCKED
05	none	yes	RENDERED

Same seed. Same shot. One variable at a time. The moderation pass fires **after** generation — so the credits are already spent when it rejects you.

Fix: “no music of any kind, diegetic sound only”

Add music in the edit

The “4K” headline isn’t in the API

RESOLUTION ENUM, VERBATIM

```
["480p", "720p"]
```

Default is **480p**. Most people never change it.

SEEDANCE 2.0, SAME ACCOUNT

3840_{x2160}

Genuine 4K — from the *older* model.

On this endpoint 2.5 outputs at **lower resolution than 2.0**, and costs about **60% more per second** to do it. You’re buying duration and reference control, not pixels. A fine trade — just not the one the launch pages describe.

Measured on OpenArt, 8 Aug 2026

24 fps · 854x480 · 1280x720

Other platforms untested

Turning audio off saves you nothing

CONFIGURATION	CREDITS	PER SECOND
5s / 480p	300	60.0
30s / 480p	1,810	60.3
5s / 720p	650	130.0
30s / 720p	3,905	130.2
5s / 720p — audio OFF	650	130.0

Pricing is **perfectly linear** — 30s costs exactly six 5s clips. No discount, no penalty. And audio is **free**. If you’ve been disabling it to save credits, you saved nothing and gave up the model’s best feature.

Pick duration for story, never cost

Prototype 480p → finish 720p

Credits are OpenArt’s — the ratios travel

Why your transferred motion keeps drifting

Feed the model a video of someone dancing and it tries to interpret **everything** — the person, the clothes, the lighting, the room, and somewhere in there, the movement.

Feed it a **depth map** and there's nothing left to interpret but the motion.

The problem was never the model. You handed it ten variables when you meant to hand it one. It also replaces paragraphs of camera direction — stop writing “slow orbit from a low angle rising to eye level” and just show it the geometry.

Depth map → framing & motion

Style ref → tone

Character sheet → identity
